DESIGN REGULATIONS

DIN VDE (DIN = German Standards Institute; VDE = Association of German Electrical Engineers)

Germany is the only country which has issued special design regulations for flexible electric cables for mining applications.

The 1 kV tough rubber-sheathed flexible reeling cables TRATOSMART MTO NSHTÖU, the trailing cables TRATOS MTO NTS..WÖU and the rubber-sheathed flexible cables NSSHÖU are described and standardized in DIN VDE 0250. This set of standards has found recognition in Europe and in many countries outside Europe and is accepted as or specified as "state of the art".

No such design regulations exist for the MSR Mining and TRATOSFIBRE cables. These are Tratos special cables, the design of which is based on existing design regulations or general regulations of DIN VDE.

SELECTION OF CABLE TYPE IN RELATION TO USE

In relation to the type of application the cable designs shall adopt construction characteristics required to give the cable the best performance in relation to its application.

STANDARDS AND QUALITY SYSTEM

HEALTHY & SAFETY SYSTEM

Once its decision to create a board post dedicated to furthering best practice for Health and Safety, international cable manufacturer Tratos is celebrating receipt of ISO 45001.

ISO 45001 sets out the minimum requirements for occupational health and safety management best practice and helps companies achieve the maximum return for employees, operations and customers.

REACH, WEEE & ROHS

REACH COMPLIANT

Tratos is fully compliant with the **REACH**. This is a European Union regulation concerning the **Registration, Evaluation, Authorisation and restriction of Chemicals**. It came into force on 1st June 2007 and replaced a number of European Directives and Regulations with a single system. REACH applies to substances manufactured or imported into the EU in quantities of 1 tonne or more per year. Generally, it applies to all individual chemical substances on their own, in preparations or in articles. To summarise, REACH makes the cable industry directly responsible for assessing and managing the risks posed by chemicals and providing safety information to their users.

REACH COMPLIANT

Tratos fully subscribes to The **Waste Electrical and Electronic Equipment Directive (WEEE Directive)**, introduced into UK law in January 2007 by the Waste Electrical and Electrical Equipment Regulations 2006. The WEEE Directive aims to reduce the amount of electrical and electronic equipment being produced and to encourage everyone to reuse, recycle and recover it. The WEEE Directive also aims to improve the environmental performance of businesses that manufacture, supply, use, recycle and recover electrical and electronic equipment. TRATOS has enlisted the services of the UK's leading producer compliance scheme, Valpak, whom manage our recycling obligations and also ensure our compliance to the WEEE Regulations and the Waste Batteries and Accumulators Regulations.

REACH COMPLIANT

Tratos is fully compliant with the **Restriction of Hazardous Substances (RoHS) Regulations**. These Regulations implement EU Directive 2011/65/EU which bans the placing on the EU market of new electrical and electronic equipment containing more than agreed levels of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants. Tratos fully understands the requirements of the RoHS Directive and ensures that our products, and their components, comply.

CORPORATE SOCIAL RESPONSIBILITY

Tratos adopts a Code of Ethics which adheres to the United Nations Global Compact on human rights, labour standards, protection of the environment and anti corruption measures.

Under this self regulatory code, Tratos will carry out initiatives in the environmental and social fields with special reference to environmental policies and social policies regarding child labour, compulsory labour, health and security, freedom of association and the right to collective bargaining, discrimination, disciplinary procedures, working hours and wages.

TRATOS VDE MTO[®]

MEDIUM VOLTAGE FLEXIBLE CABLES FOR TRAILING OPERATIONS / NTSCGEWÖU & NTSCWOU

TRATOSFLEX MTO[®]-SB TRATOSFLEX MTO[®]-SB (CSS) with Copper Core Shield

As power supply or connection cables for large material handling machines, e.g. excavators in open-cast mines subject to extremely high mechanical stresses. Particularly suitable for applications in which abrasion and chaffing stresses are to be expected in trailing operation.

FEATURES AND PERFORMANCES

CONSTRUCTION

- **Conductor:** Electrolytic copper, tinned, finely stranded, Class 5 (Protective-earth conductor: electrolytic copper, tinned, very finely stranded, Class "FS" (refer also to DIN VDE 0295)
- **Insulation:** TRATOS MTO, basic material EPR, compound type: 3GI3 (refer also to DIN VDE 0207, Part 20)
- **Arrangement of protective-earth conductor⁽¹⁾:** With protective-earth conductor split into three in the outer interstices
- **Electrical Field Control⁽²⁾:** Inner and outer semiconductive layer of semiconductive rubber
- **Core arrangement⁽³⁾:** Three main conductors laid-up, with protective-earth conductor split into three in the outer interstices
- **Tape:** Extremely tear-resistant reinforcing tape which prevents sheath movement
- **Inner & Outer sheath:** Complete sheath (inner and outer sheath) of special extremely abrasion-resistant and tear-proof chloroprene rubber compound, inner and outer sheath inseparably bonded compound type: 5GM5 (refer also to DIN VDE 0207, Part 21)
- **Marking:** (Year of manufacture) (serial number) <VDE> TRATOSFLEX MTO-SB NTSCGEWÖU (number of cores) x (cross-section) (rated voltage)
- **Core Identification:** Natural colouring with black semiconductive rubber

TRATOSFLEX MTO®- OCS Single-Core

As a general rule, single-core cables are used in short lengths, e.g. for connection of switchgear cubicles and for connection of mobile transformer substations to the overhead line. When laying and during operation care should be taken to protect them against excessive mechanical stresses.
